

Dry Purge

Dry Purge is an aerosol can of inert dry gas for the blanketing of moisture sensitive materials.

Dry Purge helps the end user extend the shelf life of partially used containers of these materials including polyurethane resins and curing agents, adhesive primers and other materials susceptible to moisture contamination.

Dry Purge is:

- Easy to use
- Ideal for laboratory use
- Extends material shelf life
- Non-flammable
- Non-contaminating
- Prevents material waste
- Eliminates bulky cylinders of Nitrogen

Dry Purge is sprayed into an open container, just before resealing the lid, to displace moisture containing air. Directions for use are printed on each can.

In order to maximize the life of your materials use Dry Purge each time containers are opened.
